Dear Desktop Engineering,

I use to read with interest your newsletter. Unfortunately, I never found mentioned metrology. Probably I missed it, although I think it must be a permanent topic of your journal.

Without metrology our life has no-direction & no-sense. As a matter of fact, "metrology" is not recognized by Windows Word English spelling and this can be explained by the fact that almost all top scientists I met at international scientific congresses on physics and chemistry did not know what's that metrology.

We must strongly militate involving all science and technology in good practice of metrology.

Attached you will find my poster at the recent International Congress of Metrology, Paris, 7-10 October, 2013 with the view to distribute/publish it.

Good luck,

gheorghe DRAGAN, ph.d.physics
