

**DISCUSSIONS ON APPLIED METROLOGY**  
**GDF DATABANKS BULLETIN VOL. 3 , No. 2 (1999)**

no	chapter	pp
1	Author's motivation	1
2	Standard operating procedure and measuring instrument	4
3	Measuring system and topoenergetic principles	6
4	Statistical analysis of experimental data	6
5	Reference (standard) normal distribution	14
6	Real normal distribution	19
7	Degrees of freedom, uncertainty and relativistic effects	20
8	Statistical test of significance on two selections	22
9	True value, errors and uncertainty	27
10	Uncertainty estimation by statistical methods (type A)	29
11	Calibration : comparison of two selections in biunivocal relationship	31
12	Standard requirements for uncertainty	35
13	Analysis of a practical example of calibration	35
14	Fourier transform technique in uncertainty analysis	42
15	Practical examples of uncertainty budget evaluation	45
16	References	53
17	Annexes 1-9 : unconventional units for length, volume, temperature, force, pressure, energy, power, radiation	55

**MEASUREMENT AND CALIBRATION**  
**GDF DATABANKS BULLETIN , Vol.4, No.2 , 2000**

1	Measurement. Uncertainty Budget for Direct and Indirect Quantities	1
2	Calibration. Structure of Calibration Certificate	15
3	Discrete Fourier Transform (DFT) in Calibration	25
4	DFT Cross Analysis of Standard and Observed Values	35

**Brochures are accompanied by a floppy disk with complete Calibration Certificates and working tables for direct and indirect quantities issued in Excel (Windows 95-98) by using both composition rules (Welch-Stattertwaite and FOM) with basic applications.**

**ORDERS :**

- BY SIMPLY PAYING 100 USD IN OUR BANK ACCOUNT (see the inside cover), OR BY INTERNATIONAL CHEQUE .
- YOU CAN ASK PRIOR FOR THE PROFORMA INVOICE .
- THE PRICE INCLUDES BOTH ISSUES AND ALL TAXES (ALSO FOR SHIPMENT).
