Composite structure of human mind. HuPoTest results on 7 weeks of fasting before Orthodox Easter 2019.

Present study continues series of personal HuPoTest measurements during fasting before Orthodox holidays [1, 2] revealing the composite structure of mind according to general meaning established in topoenergetic terms for a wide categories of transforming systems [3]. Significance of resulted parameters was reviewed again in the recent book [4].

The protocol of HuPoTest measurements was the same as in the previous mentioned two studies and separately described in operating instructions [4, 5]. However, important to mention the two main aspects ensuring good HuPoTest results, namely (i) good isolation from external perturbing stimuli generating bad emotions, and (ii) accurate diet mainly excepting the meat. Every week was separately considered for final evaluation with 4-6 measurements per day (35 measurements/week).

Figures 1-3 gather all three series of weekly measurements evidencing the same nature of composite structure of my mind expressed by phylogeny parameters (n1, m1). On the other hand, results become progressively grouped to coherent thinking (Ctr), involving smaller kinetic entities (ctr) and increasing coupling strength (CS) with the inert component. These relationships are in good agreement with the previous conclusions [2].

Figures 4-6 show separately the actual results in view to evidence the weekly evolution of mind structure. It results as in the previous studies that the mind evolution is not monotonous, i.e. the first week is the worse, but week 3 is the best and this because of difficult adaptation to the new diet affecting the mind. It is also important to evidence once again the relationship between Ctr, ctr and CS during weekly evolution.

Parameters yo=intercept and Δa reveal the impulsive and slow reaction during measurements. Figures 7 and 8 show results of yo(Δa) relationship for two weeks with smallest and widest amplitude and slope of variation.

The amplitude of impulsive and slow behaviors/reactions can be evidenced by SUM of yo and Δa on respective areas. Figure 9 shows the linear dependence of the two parameters and behaviors. This linear relationship can be evidenced also by absolute reaction amplitude (RA) between impulsive and slow values RA = ABS(impulsive)+ABS(slow) given by yo and Δa, respectively (Figure 10). Figure 11 shows the relationship of the relative reaction amplitude RRA = ABS(impulsive)/ABS(slow) = ABS(impulsive/slow) given by yo and Δa, respectively. It expects also a linear relationship between RA and RRA as in Figure 12. However, it results two different branches for RRA > 1 and for < 1, respectively.

Figures 13 and 14 show the relationships between RA and RRA and structural parameters Ctr, ctr and CS, respectively. All these parameters monotonously vary with reaction amplitude:

$$RA, RRA \sim LN(Ctr) \sim -LN(ctr) \sim CS \quad (1)$$

Conclusion: For better composite structure of mind it is necessary permanently keeping a good isolation from external sources of bad emotions and proper diet.

Chapter 1

Foreword

Miguel de Cervantes Saavedras:
„*Experience is the mother of all sciences”*

My deep concern is that the present book will not affect in any way human society, although I tried to point out arguments about the next imminent nuclear conflict mainly caused by continuous and accelerated degradation of human mind in direct correlation with uncontrolled growth of population. Survivors will be only ones with properly prepared minds. These two facts are striking evidences for any one, no matter education and place on the planet Earth. The solution I propose is to permanently testing and improving our mind. Its name is HuPoTest I experienced and developed continuously for more than 50 years. Human mind is our “crazy horse” which no individual succeed to completely master during entire life. The main problem is not that there are bad guys and good guys, but it is practically impossible to know them. The only solution is to take care of our own mind. After a long and intense experience face-to-face on a large variety of individuals with HuPoTest, I established that there are 4 main categories: (i) dominating; (ii) dominated; (iii) independent and (iv) not able to perform HuPoTest. The results are not available for ever, because they can transform instantly between them (flip-flop character). The first two are dependent each other, permanently involved in conflicts up to crime and suicide. The independent ones avoid any conflict and live in honest conditions. People not able to perform HuPoTest have their minds dominated by destructive emotions. Human mind is in permanent activity, so that conscious activity is perturbed by emotions. This is the main point of the present book: to reveal the composite structure of human mind by the existence of the active component involved in coherent thinking and an inert one perturbing the conscious activity.

I invite any one who will decide to try HuPoTest to contact me for help without any obligation.
