## HuPoTest: Behavior splitting = dual behavior

HuPoTest procedure on the five fasting weeks before 2020 Christmas holiday revealed new behavior driven by the unexpected death of two very close relatives. Mental concentration was strongly affected, so the results have evidenced this behavior as a splitting or dual behavior.

However, weekly variations of  $y_0(\Delta a)$  (Figures 1- 5) show systematic smaller scattering than in the previous similar tests [1, 2]. For their mutual comparison the scales of the two parameters are the same, respectively, for all 5 figures.

Figures 14 – 16 evidence in more details the weekly scattering of parameters  $y_0$  and  $\Delta a$  and their correlations. There is no monotonous variation as function of week number.

Behavior splitting = dual behavior clearly appears in the weekly dependences  $\text{LN}(K_{23})$  vs  $\text{LN}(C \cdot K_{33})$  in Figures 6 – 10. Important to notice that in the first week all points are closely gathered along a single line = unique behavior. The dramatic above mentioned deaths have occurred in the second week, so that clearly appear two distinct lines and this dual behavior persists in the following weeks.

Figure 11 also clearly shows two distinct behaviors in dependence of  $N(M)$  denoted as A and B. However, the dependences of the kinetic unit (ctr) and coupling strength (CS) on mental concentration = focus amplitude (M) gather all points on the same curve so this reveals the same nature of mind activity for all branches. In Figures 11 – 13 points correspond to each branch from Figures 6 – 10, and marked by two figures. For instance 4-II means the branch in week 4 marked as II (see Figure 9).

Important to notice that the mental behavior in the week 1 when the mind was in most relaxed state is not the best in the all series of branches. This means that dramatic events could help for better mental focusing, so these appear as a “cleaning agents”, but depends on the previous experience of the person under test. Important to mention that mental focusing means the depth at which the mind is able to plunge inside inner self and represents the key of the overall health. This is also the key of meditation in the Yoga philosophy realized in four levels of perfection corresponding to progressive depth: Karma Yoga, Jnana Yoga, Bhakti Yoga and Raja Yoga [3]. To plunge inside inner self means progressive separation from external world and final God realization at different levels depending on the reached depth of meditation. Samadhi is the deepest level at which living human being realizes the Universal Truth [3]. HuPoTest is the most effective procedure to attain and quantitatively estimate these levels [4]. For good results it is of capital importance to continuously follow the rules for proper life recommended both by Yoga philosophy [3] and Jesus experience = Christian faith explained in the Holy Bible.

## Chapter 1

### Foreword

Miguel de Cervantes Saavedras:  
*„Experience is the mother of all sciences”*

My deep concern is that the present book will not affect in any way human society, although I tried to point out arguments about the next imminent nuclear conflict mainly caused by continuous and accelerated degradation of human mind in direct correlation with uncontrolled growth of population. Survivors will be only ones with properly prepared minds. These two facts are striking evidences for any one, no matter education and place on the planet Earth. The solution I propose is to permanently testing and improving our mind. Its name is HuPoTest I experienced and developed continuously for more than 50 years. Human mind is our “crazy horse” which no individual succeed to completely master during entire life. The main problem is not that there are bad guys and good guys, but it is practically impossible to know them. The only solution is to take care of our own mind. After a long and intense experience face-to-face on a large variety of individuals with HuPoTest, I established that there are 4 main categories: (i) dominating; (ii) dominated; (iii) independent and (iv) not able to perform HuPoTest. The results are not available for ever, because they can transform instantly between them (flip-flop character). The first two are dependent each other, permanently involved in conflicts up to crime and suicide. The independent ones avoid any conflict and live in honest conditions. People not able to perform HuPoTest have their minds dominated by destructive emotions. Human mind is in permanent activity, so that conscious activity is perturbed by emotions. This is the main point of the present book: to reveal the composite structure of human mind by the existence of the active component involved in coherent thinking and an inert one perturbing the conscious activity. I invite any one who will decide to try HuPoTest to contact me for help without any obligation.

Bucharest, February 2019
