Interaction of capacitors with Human Mental Field and Bio-Fields. XV. Aluminum electrolytic capacitors 8x3300 µF@25V@2021.

Experiments on simultaneous 8 electrolytic capacitors of 3300  $\mu$ F@25 V as it was previously described in Figure 1 (Test-2) and Figure 2 (R) [1] were carried out for approximately 8 months during 2021 in weekly periodicity. Specific contributions of BF and HMF were evidenced in good agreement with previous similar measurements in this series [1].

Obtained results for 24 hr of continuous measurements by using data logger Picolog 20 ADC at scale of  $\pm$  1.25 V and 1 S/minute are given in the attached figures. The first 10 measurements/figures are performed every day and show a sort of progressive "accommodation" of electrolytic capacitors with the local BF and HMF. The following measurements are performed on each Monday. All graphics represent the variation of averaged values of Udc(HOD) over the 8 capacitors.

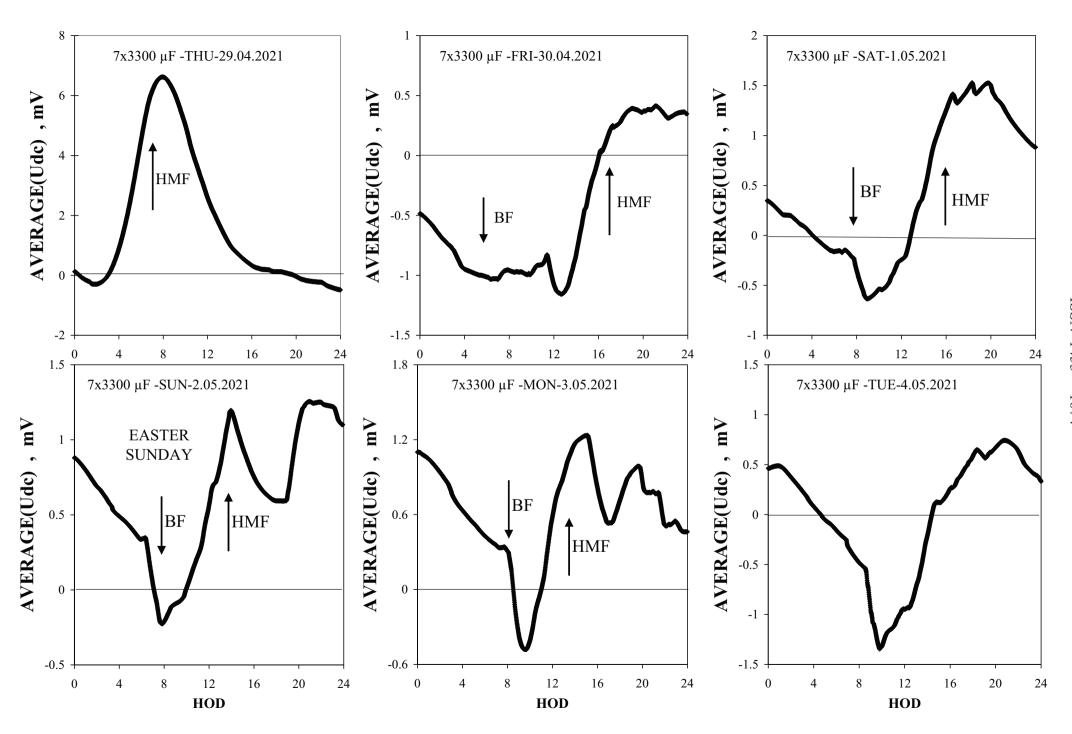

It is important to mention that there were no other persons than me entering in the house during all previous and present measurements. In this way my personal field was almost constant and has minor contribution. On the other hand, similar measurements performed in another location (for instance in a public school) revealed completely different results with no clear significance. After several years of continuous measurements especially on electrolyte solutions in different measuring systems I am able to conclude that the house acts as a focusing lens of environment HMF and BF.

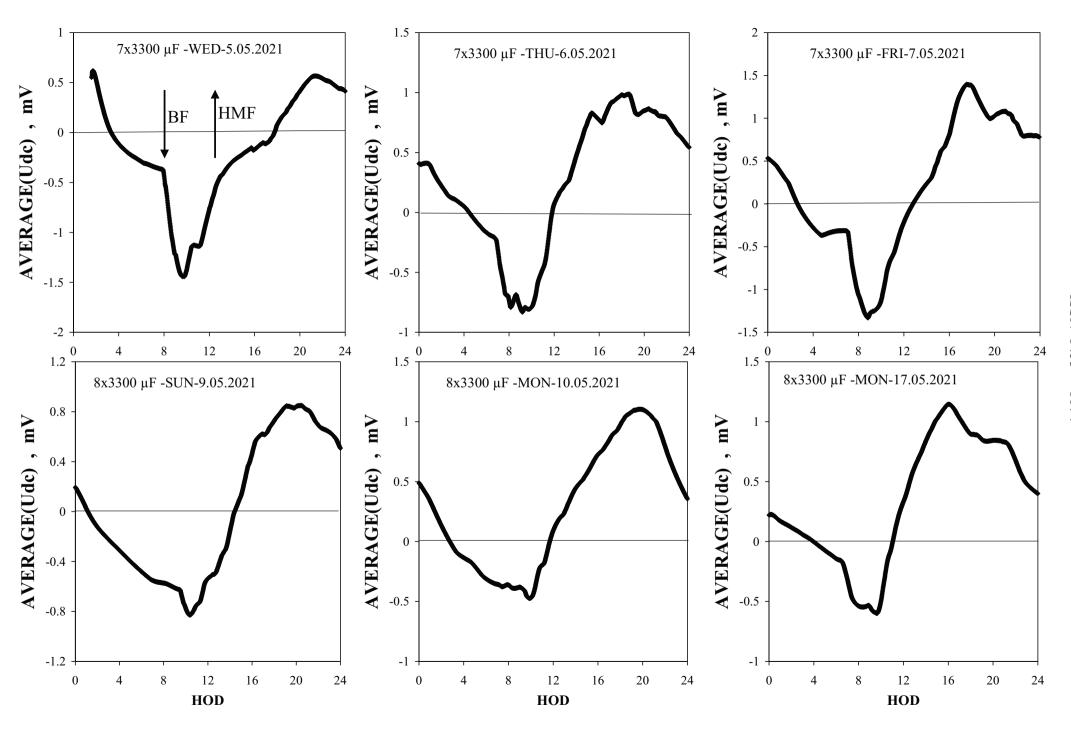

Present and previous measurements [1] evidence the same time distribution and pattern of BF and HMF as in the previous series of measurements by using energized capacitors in differential circuit [2] and in similar measurements on electrolyte aqueous solutions [3, 4]. In the next paper the local intensity of Udc is the same as in these cited previous measurements.

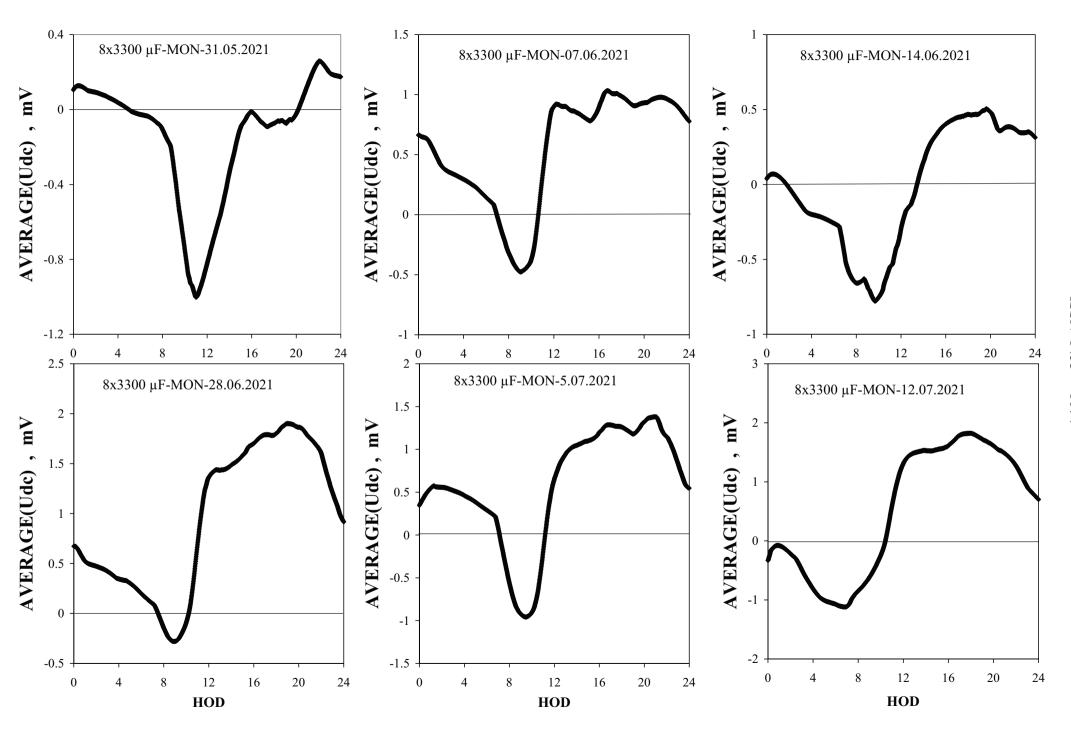

Calculations on these measurements will be detailed in the next paper in view to evidence more valuable information.

#### Gheorghe DRAGAN - Composite structure of human mind

## Chapter 1

#### Foreword

Miguel de Cervantes Saavedras: "Experience is the mother of all sciences"

My deep concern is that the present book will not affect in any way human society, although I tried to point out arguments about the next imminent nuclear conflict mainly caused by continuous and accelerated degradation of human mind in direct correlation with uncontrolled growth of population. Survivors will be only ones with properly prepared minds. These two facts are striking evidences for any one, no matter education and place on the planet Earth. The solution I propose is to permanently testing and improving our mind. Its name is HuPoTest I experienced and developed continuously for more than 50 years. Human mind is our "crazy horse" which no individual succeed to completely master during entire life. The main problem is not that there are bad guys and good guys, but it is practically impossible to know them. The only solution is to take care of our own mind. After a long and intense experience face-to-face on a large variety of individuals with HuPoTest, I established that there are 4 main categories: (i) dominating; (ii) dominated; (iii) independent and (iv) not able to perform HuPoTest. The results are not available for ever, because they can transform instantly between them (flip-flop character). The first two are dependent each other, permanently involved in conflicts up to crime and suicide. The independent ones avoid any conflict and live in honest conditions. People not able to perform HuPoTest have their minds dominated by destructive emotions. Human mind is in permanent activity, so that conscious activity is perturbed by emotions. This is the main point of the present book: to reveal the composite structure of human mind by the existence of the active component involved in coherent thinking and an inert one perturbing the conscious activity.

I invite any one who will decide to try HuPoTest to contact me for help without any obligation.

Bucharest, February 2019

#### **ERRATUM:**

VOL.	NO.	place	CORRECT
15	2	Figure 5	P-
15	3	page 5, row 7 down-to-up	x = 0.2
22	3	Figures 4-6	Values of dTc and exchanged heat must be divided by 10
22	6	Figure 4	-N^2/M values are negative;
23	1	Figure 5	See Figure 8 and comments in issue 23(3)
23	1	HuPoTest-significance of calculated parameters	(yo, $\Delta$ b)<0, $\Delta$ a>0: slow reaction (yo, $\Delta$ b)>0, $\Delta$ a<0: impulsive reaction
25	9	Figure 4	III: n1=0.711 ± 0.076; m1=154 ±4.6

I encourage readers to advice me any observation.
