Interaction of capacitors with Human Mental Field and Bio-Fields. XVI. Aluminum electrolytic capacitors 8x3300 µF@25V@2021.

Previously presented graphics of Udc(HOD) obtained on 8 electrolytic capacitors of 3300 μ F@25V [1] directly connected at the Picolog ADC 20 data logger (see Figure 1 (Test-2) and Figure 2 (R) [2]) are mathematically retrieved in view to reveal their significance.

Figure 1 and Figure 2 show variations of parameters Mm and Δ Udc, respectively, systematically considered in the all previous measurements in this series. All parameters are averaged on the 8 capacitors and with associated standard error bars. As in the previous measurements, HMF has a greater effect than BF due by the main contribution of human society around measurement location, so Mm evidences clear HMF behavior in the period of covid relaxation during summer holiday and panic in the back to work and school period in the fall due by the new covid wave.

Figure 3 shows variations of parameter defined as the following algebraic sums:

sum-1 = SUM(Udc(0), Udc(min)); sum-2 = SUM(Udc(min), Udc(24 hr))(1).

sum-1 prevailing reveals BF while sum-2 HMF and it results again that HMF has a greater contribution mainly due by people reactions to the restrictions imposed for 4^{th} covid wave. It appears also the two different behaviors mentioned for Figure 1. The great amplitude of sum-2 in the fall period is due also by HMF activity during the night.

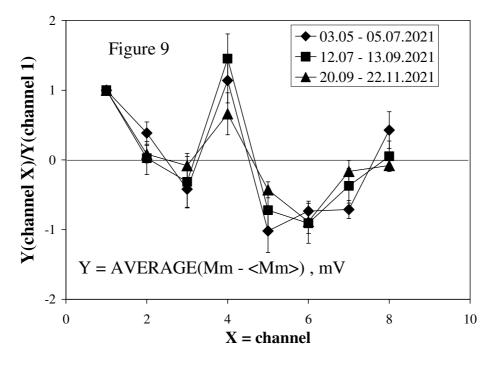

Figure 4 shows the variation of HOD(min(Udc)) where min(Udc) = maximum activity of BF. Udc < 0 for BF and Udc > 0 for HMF, so the following parameters:

$$sum - = SUM(Udc < 0); sum + = SUM(Udc > 0)$$
⁽²⁾

so these parameters show contributions of BF (Figure 5) and HMF(Figure 6), respectively.

Figures 7 and 8 show the energy accumulated by capacitors specific to BF and HMF, respectively, so all these parameters evidence the same spectrum of contributions.

Figure 9 shows the results on three series of 10 measurements each for parameter Y expressed in relative units. It is obvious as in the previous measurements (see Figures 1 and 4 in [3]) that each location of capacitor has a specific potential.

Chapter 1

Foreword

Miguel de Cervantes Saavedras: "Experience is the mother of all sciences"

My deep concern is that the present book will not affect in any way human society, although I tried to point out arguments about the next imminent nuclear conflict mainly caused by continuous and accelerated degradation of human mind in direct correlation with uncontrolled growth of population. Survivors will be only ones with properly prepared minds. These two facts are striking evidences for any one, no matter education and place on the planet Earth. The solution I propose is to permanently testing and improving our mind. Its name is HuPoTest I experienced and developed continuously for more than 50 years. Human mind is our "crazy horse" which no individual succeed to completely master during entire life. The main problem is not that there are bad guys and good guys, but it is practically impossible to know them. The only solution is to take care of our own mind. After a long and intense experience face-to-face on a large variety of individuals with HuPoTest, I established that there are 4 main categories: (i) dominating; (ii) dominated; (iii) independent and (iv) not able to perform HuPoTest. The results are not available for ever, because they can transform instantly between them (flip-flop character). The first two are dependent each other, permanently involved in conflicts up to crime and suicide. The independent ones avoid any conflict and live in honest conditions. People not able to perform HuPoTest have their minds dominated by destructive emotions. Human mind is in permanent activity, so that conscious activity is perturbed by emotions. This is the main point of the present book: to reveal the composite structure of human mind by the existence of the active component involved in coherent thinking and an inert one perturbing the conscious activity. I invite any one who will decide to try HuPoTest to contact me for help without any obligation.
