Simple procedure evidencing HMF and BF

Thorough previous experiments on electrolytic capacitors [1, 2] have substantiated measurements by using simple digital multimeters. Such measurements were performed in the present study by comparing values observed at each hour over 24 hour interval on two identical digital multimeters (Figure 1) with measurements by the previously described procedure using a data logger on 8 capacitors at each #1 minute [2]. All measurements were carried out on 6800 μ F/6.3 V with the resolution of #0.1 mV and #0.001 mV, respectively.

Attached graphics show the results obtained in two days where the contribution of HMF and BF are different. For instance, SAT 2.04.2022 was a rainy day after a long period of drought and the vegetation reacted by a high BF energy taking into account the specific of the season, while HMF was very low because was a free day and also the rain had a high relaxation effect on humans. By contrast, measurements on WED 6.04.2022 show the contributions of both BF and HMF as in the most of previous measurements [1, 2 and citations therein].

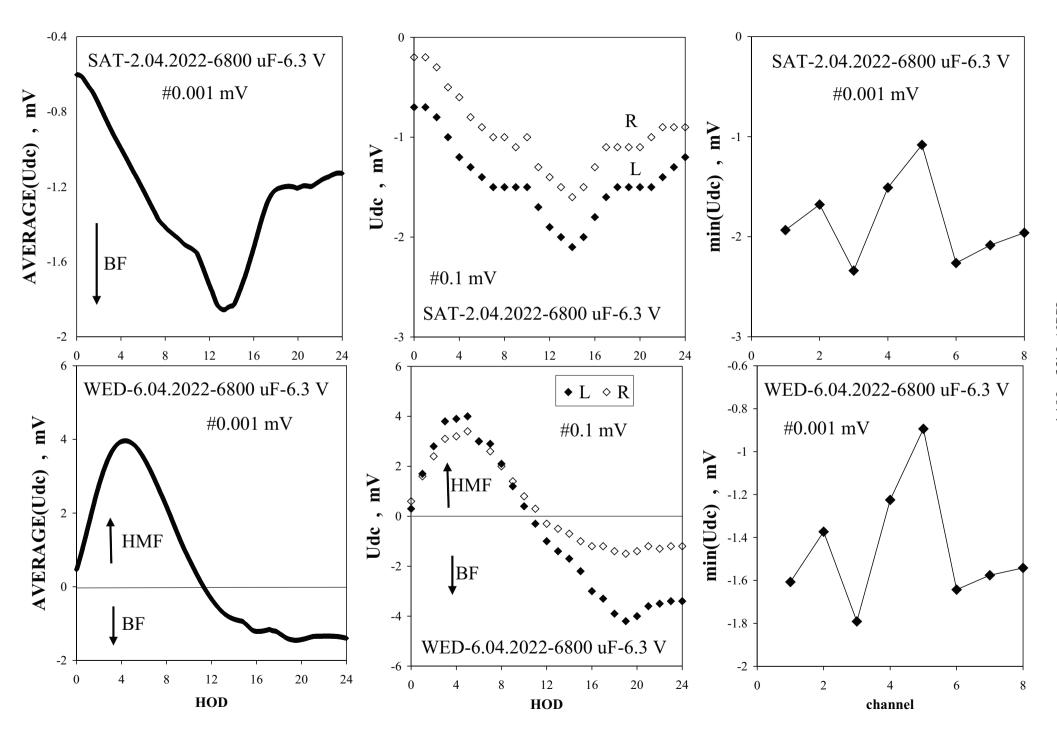

The most important result is that both series of measurements show the same pattern of HMF and BF. In this way, the simple measurements by using a suitable electrolytic capacitor and a digital multimeter can evidence the instant resultant of HMF and BF in a chosen location.

Gheorghe DRAGAN - Composite structure of human mind

Chapter 1

Foreword

Miguel de Cervantes Saavedras: "Experience is the mother of all sciences"

My deep concern is that the present book will not affect in any way human society, although I tried to point out arguments about the next imminent nuclear conflict mainly caused by continuous and accelerated degradation of human mind in direct correlation with uncontrolled growth of population. Survivors will be only ones with properly prepared minds. These two facts are striking evidences for any one, no matter education and place on the planet Earth. The solution I propose is to permanently testing and improving our mind. Its name is HuPoTest I experienced and developed continuously for more than 50 years. Human mind is our "crazy horse" which no individual succeed to completely master during entire life. The main problem is not that there are bad guys and good guys, but it is practically impossible to know them. The only solution is to take care of our own mind. After a long and intense experience face-to-face on a large variety of individuals with HuPoTest, I established that there are 4 main categories: (i) dominating; (ii) dominated; (iii) independent and (iv) not able to perform HuPoTest. The results are not available for ever, because they can transform instantly between them (flip-flop character). The first two are dependent each other, permanently involved in conflicts up to crime and suicide. The independent ones avoid any conflict and live in honest conditions. People not able to perform HuPoTest have their minds dominated by destructive emotions. Human mind is in permanent activity, so that conscious activity is perturbed by emotions. This is the main point of the present book: to reveal the composite structure of human mind by the existence of the active component involved in coherent thinking and an inert one perturbing the conscious activity.

I invite any one who will decide to try HuPoTest to contact me for help without any obligation.

Bucharest, February 2019
